Double Alpha HR Consulting Ltd

Job Reference: TRSALES202604

Job Opening: Sales Engineer

Location: South Korea

Industry: Automation

Role Purpose

As a Sales Engineer, you will be responsible for driving business growth by promoting our comprehensive automation solutions—including PLC, HMI, Servo Systems, VFDs, and Machine Vision. You will balance direct high-end customer development (EU customers) with strategic channel management to establish a strong market presence and achieve long-term sales targets.

Core Job Responsibilities

Market Strategy: Conduct in-depth research on the local industrial automation market and competitor dynamics; formulate and execute effective regional sales strategies.

Key Account Development: Independently identify and develop large to medium-sized end-users (EU customers). Manage the full sales cycle to create successful benchmark cases.

Channel Management: Screen and manage high-quality local distributors. Establish cooperation policies, assessment mechanisms, and provide technical/sales training to empower the channel network.

Performance Management: Achieve sales targets, manage payment collection risks, and ensure all business activities comply with cross-border trade regulations.

Brand Promotion: Increase brand influence by representing the company at local industry exhibitions, seminars, and technical networking events.

Key Job Challenges

Utilizing existing industry resources to quickly identify target customer groups and secure product trial opportunities.

Coordinating with local brands to complete technical product testing and scaling sales from initial samples to large-scale deployment.

Qualifications & Requirements

Education: Bachelor's degree or above in Automation, Electrical Engineering, or a related technical field.

Experience: Minimum of 5 years of frontline sales experience in the industrial automation industry is highly preferred. Proven track record in developing local end-customer or channel resources.
